Conclusion & Future Scope

# BACKGROUND

68 PERCENT OF  
PEOPLE WITH  
HEARING LOSS FEEL  
ISOLATED AT WORK  
AS A RESULT  
OF NOT BEING ABLE  
TO COMMUNICATE

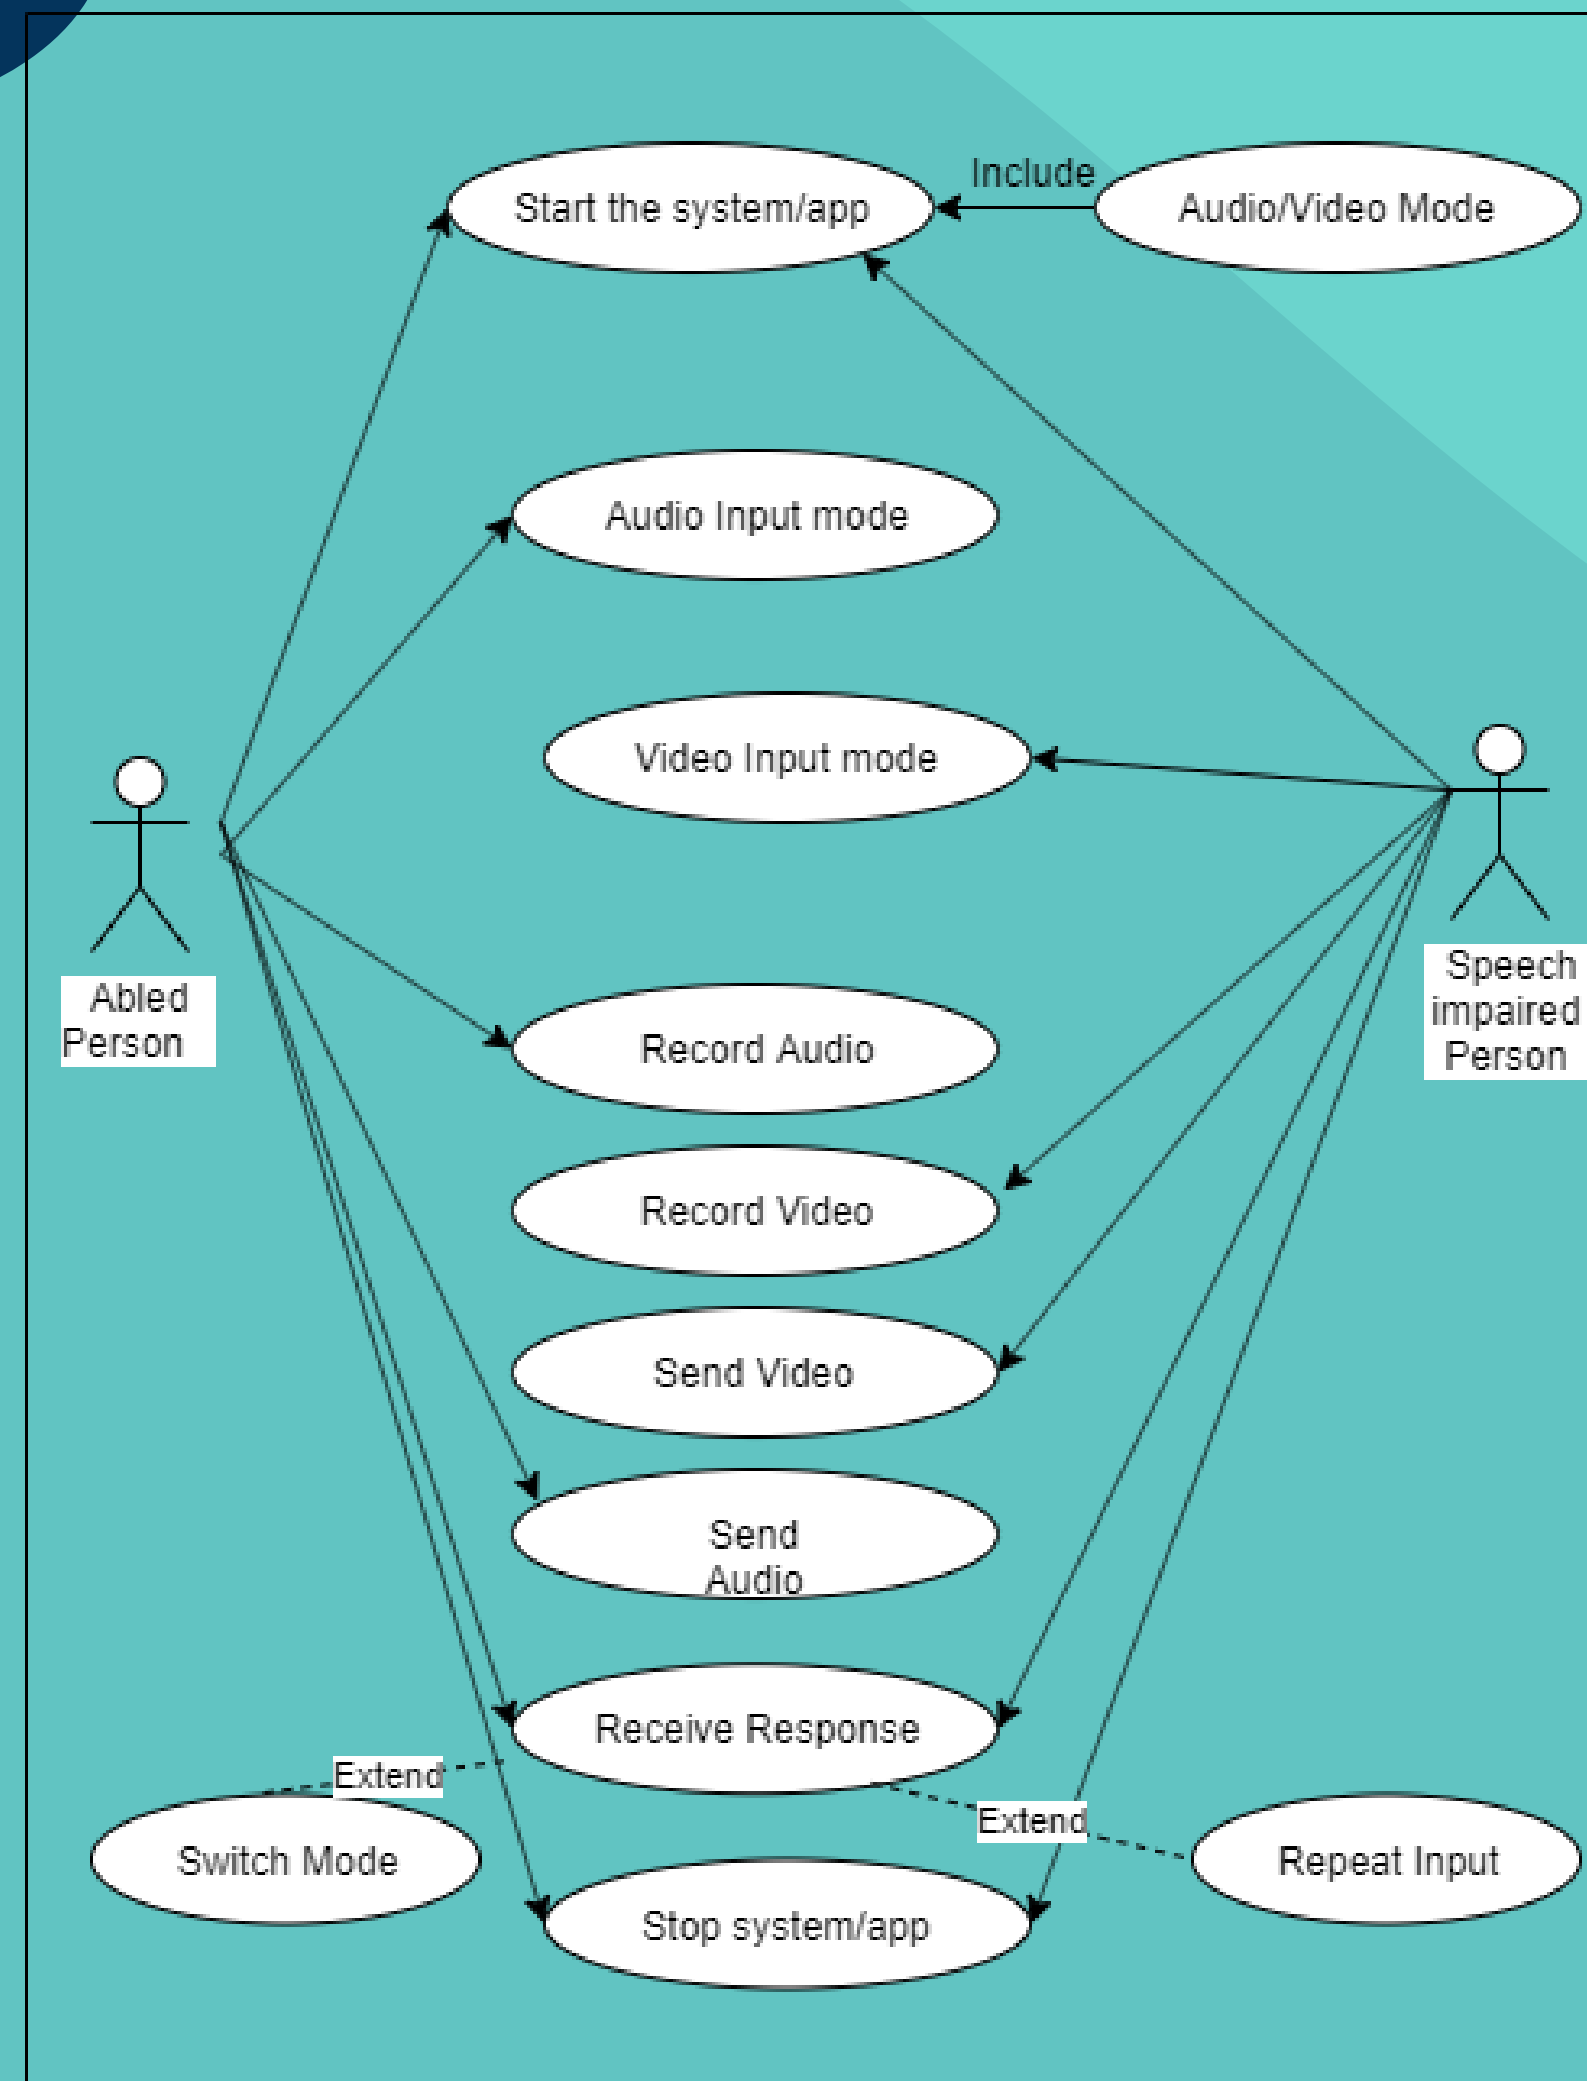

31 PERCENT OF  
PEOPLE FEEL THEY  
ARE TREATED  
DIFFERENTLY  
BECAUSE OF THEIR  
DEAFNESS

33 PERCENT OF  
PEOPLE WHO ARE  
DEAF AVOID SOCIAL  
SITUATIONS  
BECAUSE THEY  
FIND IT DIFFICULT TO  
COMMUNICATE

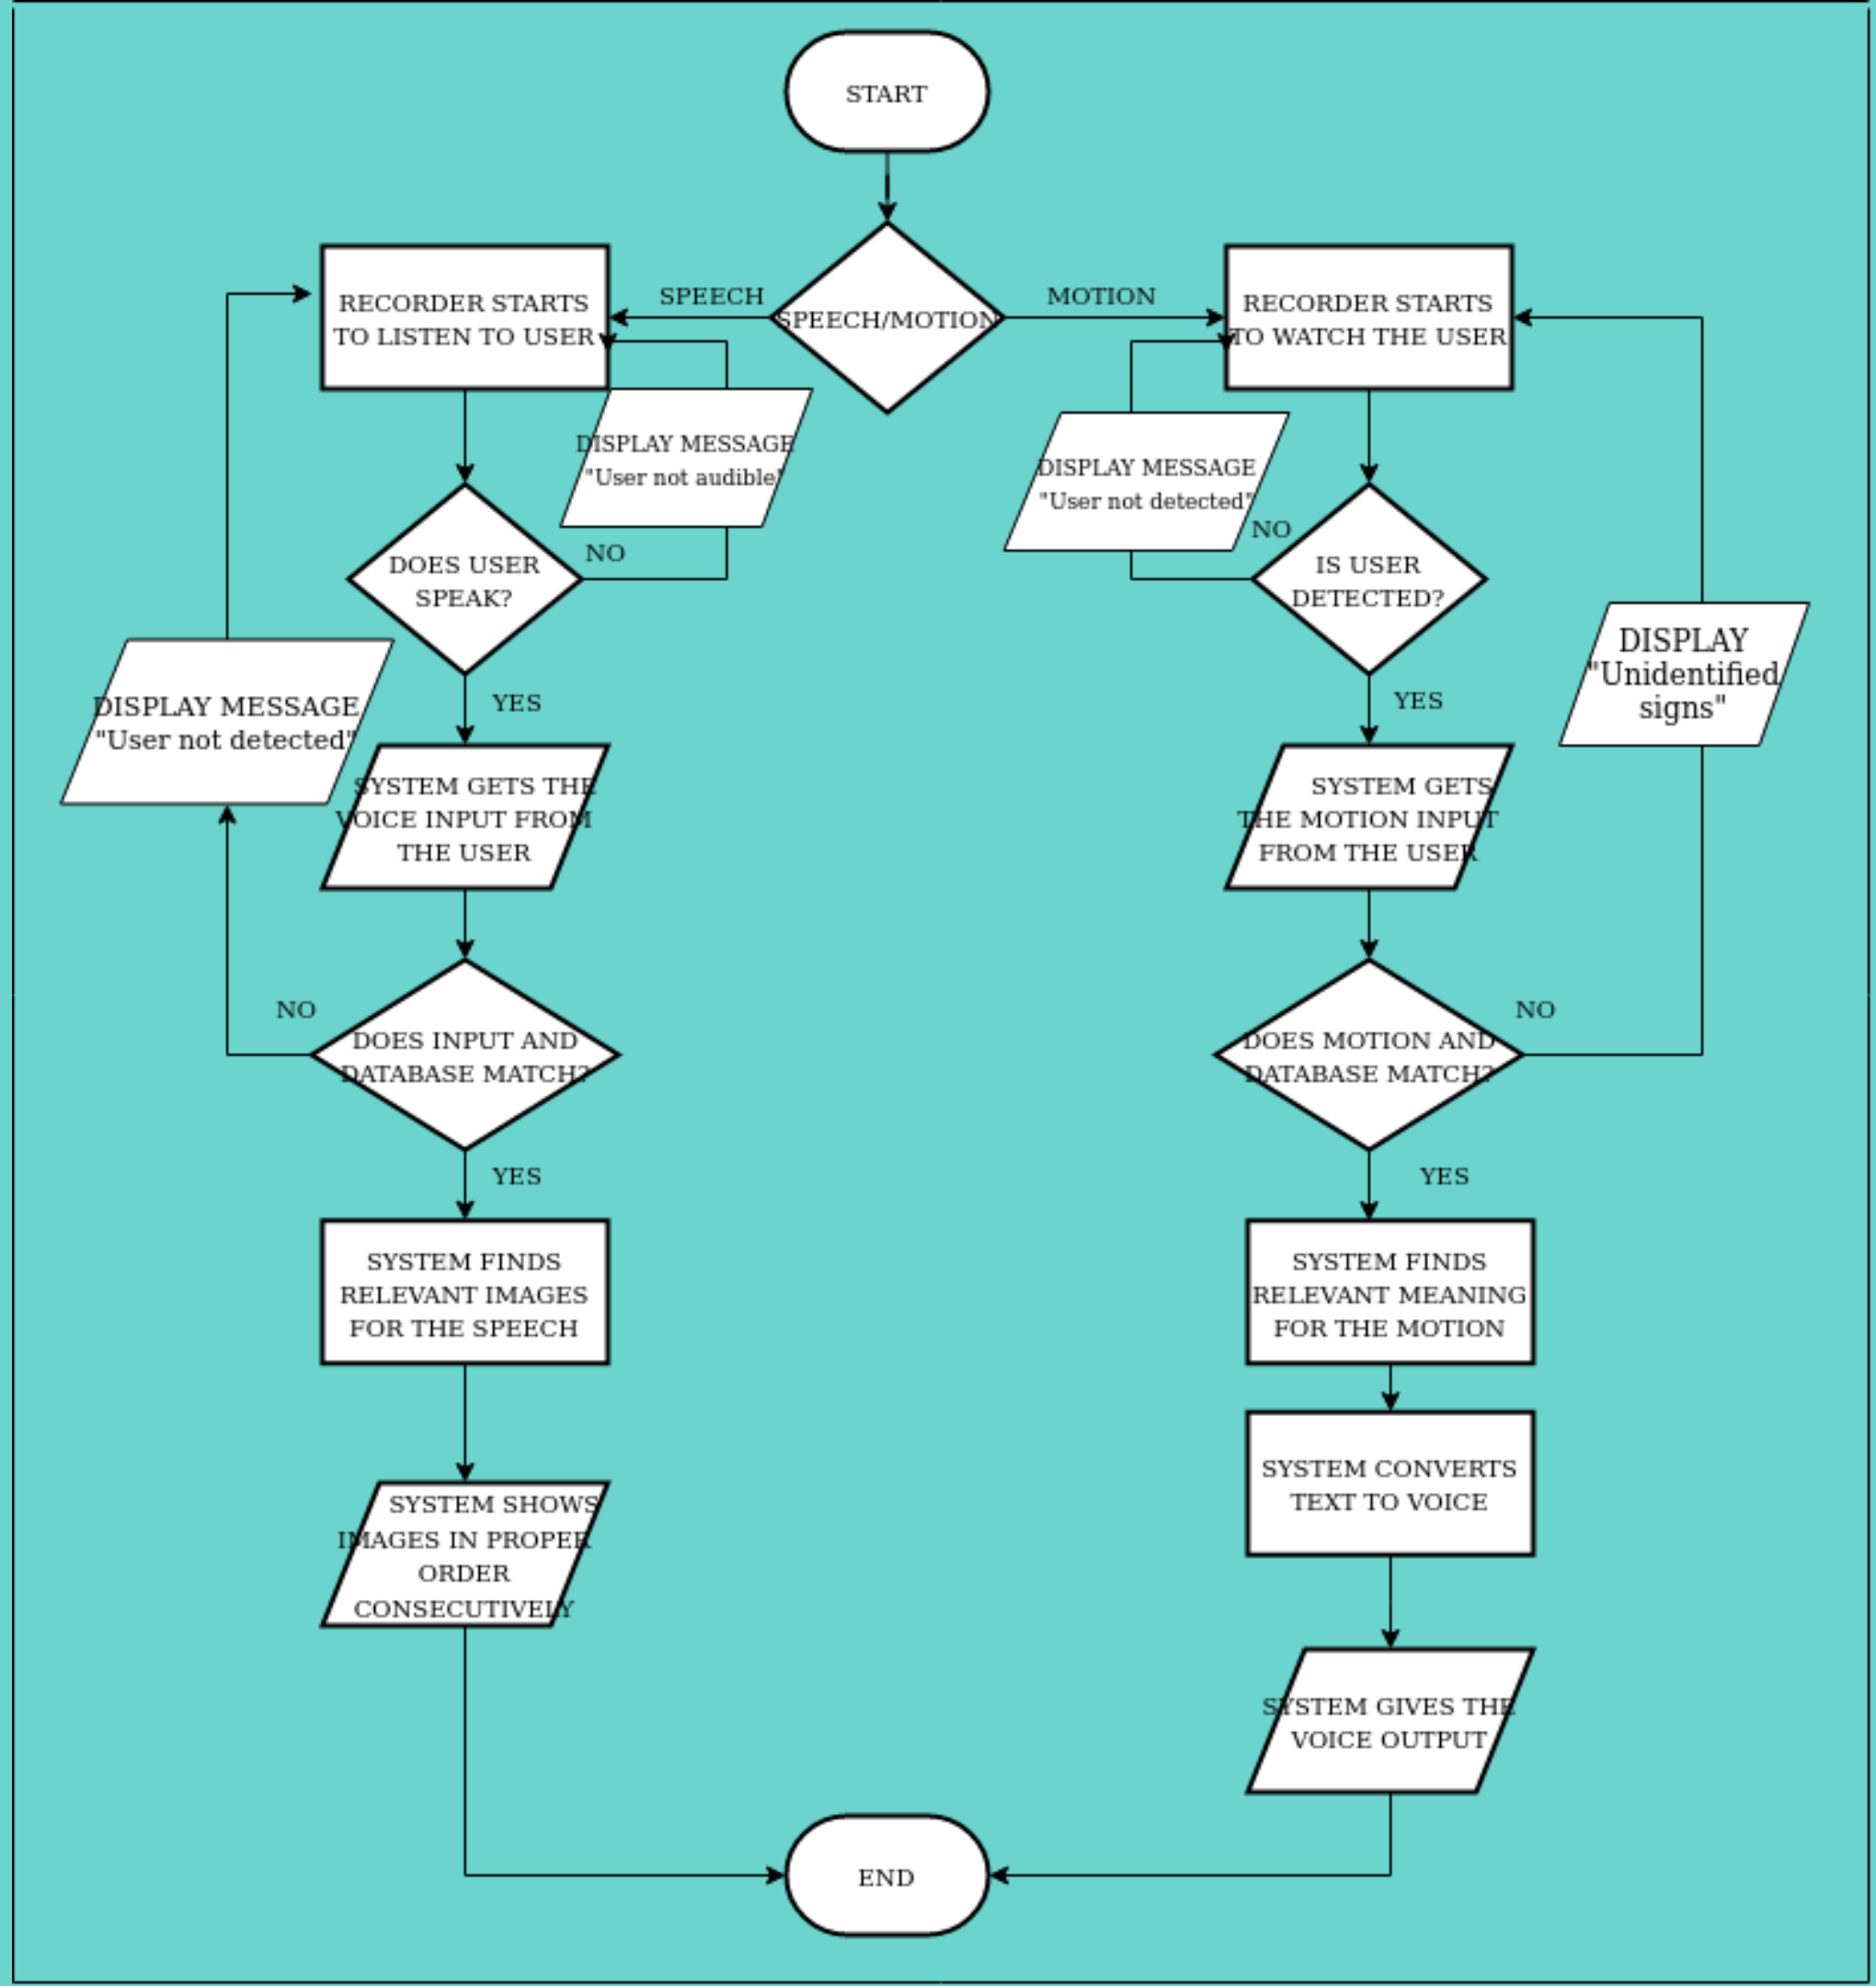

# LITERATURE SURVEY

| Sr.no | Paper   | I/p and o/p Algorithm used   | Accuracy Issues  |
|-------|---|--|--|
| 1     | <b>Corneliu Lungociu,Real Time Sign Language Recognition Using Artificial Neural Networks, Studia Univ. Babes_Bolyai, Informatica, Volume LVI, Number 2011.</b>   | A neural network-based approach for the sign language recognition with recognition   | The accuracy achieved is 80%.  |
| 2     | <b>Kanchan Dabre, Surekha Dholay. Machine Learning Model for Sign Language Interpretation using Webcam Images. 2014 International Conference on Circuits, Systems, Communication and Information Technology Applications (CSCITA).</b>                | -Haar Cascade classifier for classification.<br>-Microsoft .NET framework for speech synthesis.  | The speech synthesis phase of sign recognition process sometimes gives delayed response.   |
| 3     | <b>Hasan, M., Sajib, T. H., &amp; Dey, M. (2016). A machine learning based approach for the detection and recognition of Bangla sign language. 2016 International Conference on Medical Engineering, Health Informatics and Technology (MediTec).</b> | -Hand Gesture recognition is performed using HOG (Histogram of Oriented Gradients).<br>-SVM (Support Vector Machine) used as classifier. | 86.53% accuracy for only 16 predefined static gestures.  |
| 4     | <b>Rajaganapathy, S., Aravind, B., Keerthana, B., &amp; Sivagami, M. (2015). Conversation of Sign Language to Speech with Human Gestures. Procedia Computer Science, 50, 10–15.</b>   | Microsoft's Kinect sensor with program developed on .NET platform.   | -The gesture tracking is limited only to 2 individuals.<br>-The sensor cannot recognize the human objects beyond 40cm to 4m range. |

# PROPOSED SYSTEM

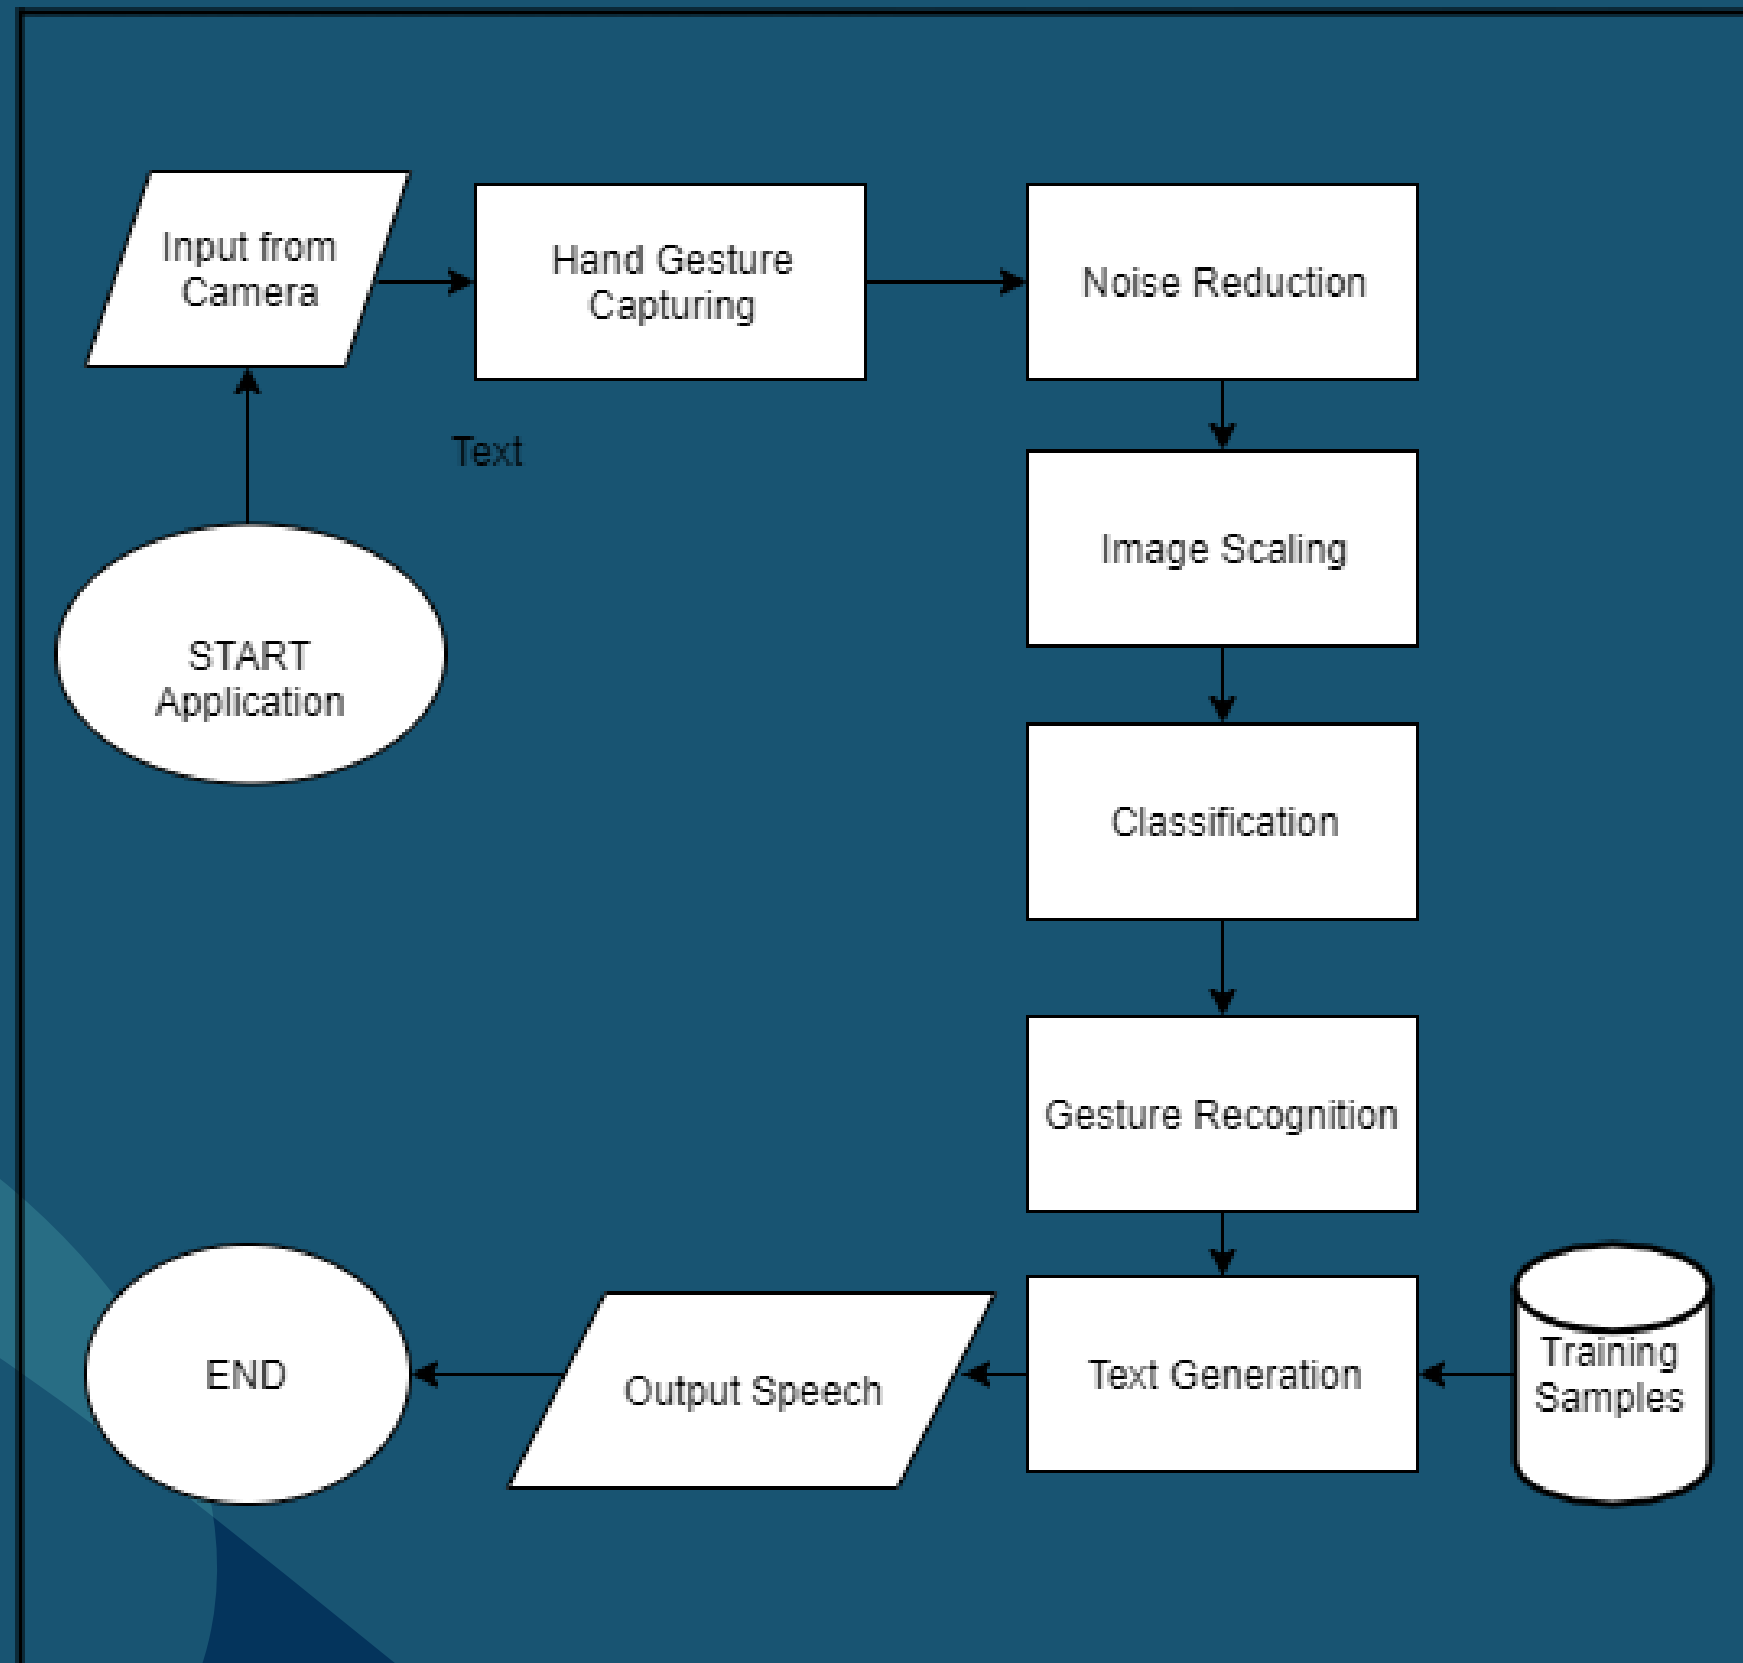

# DESIGN OF THE SYSTEM

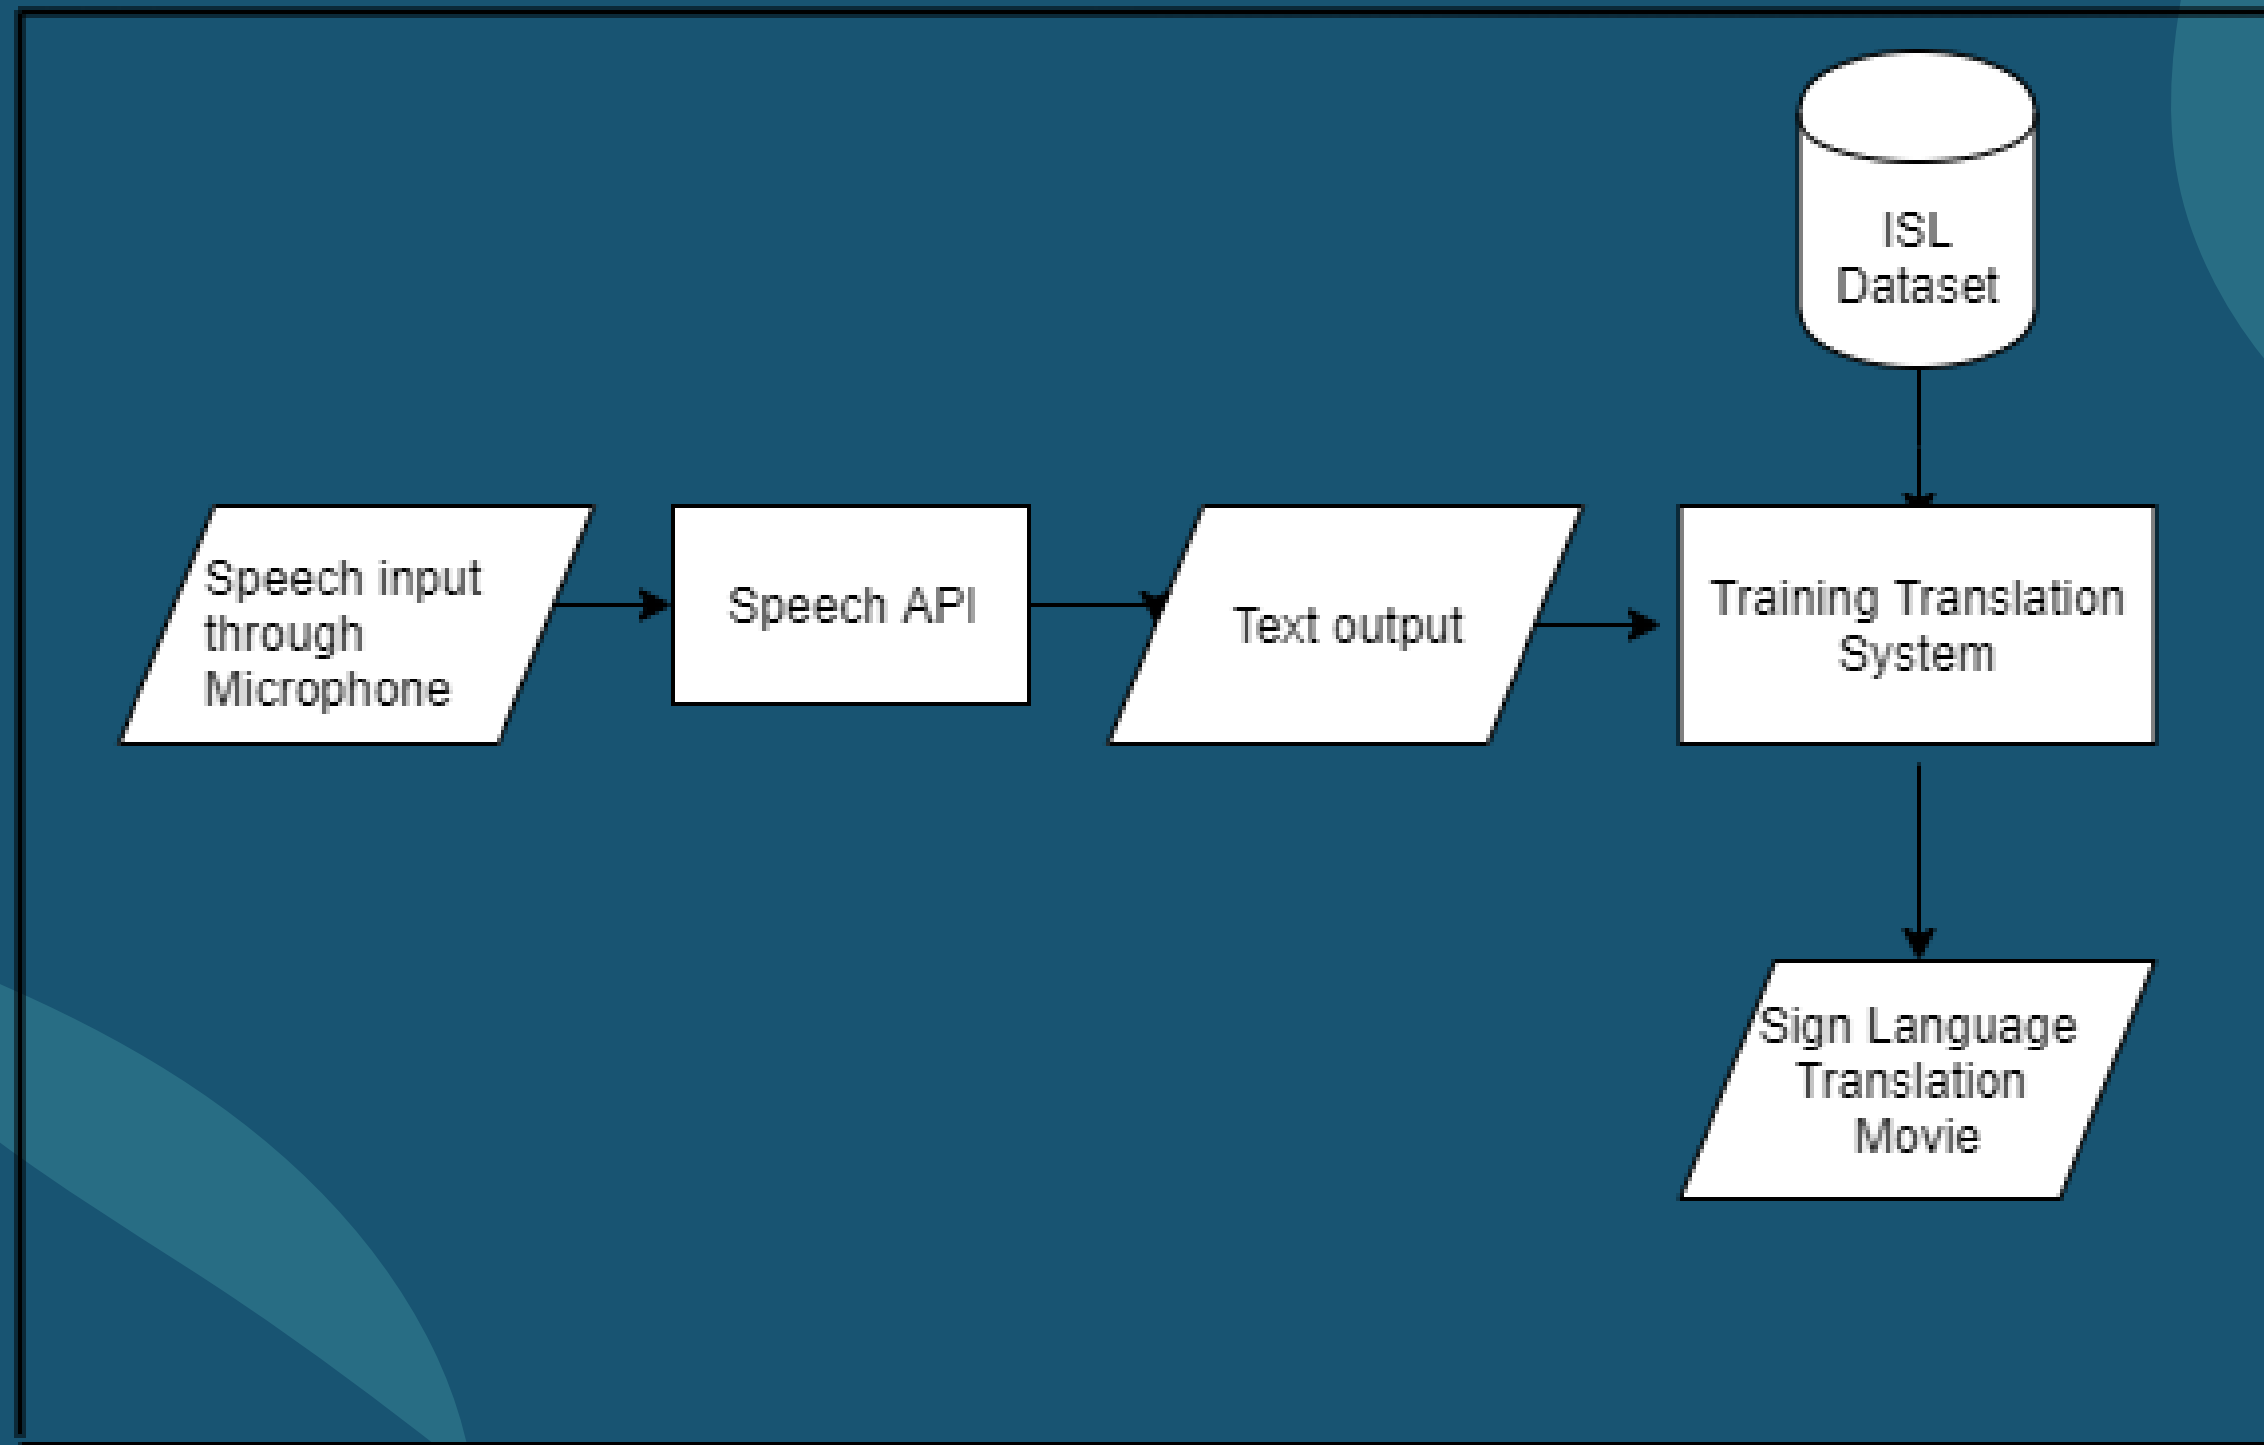

# PHASE-I

# PHASE-II

# RESULTS

# CONCLUSION & FUTURE SCOPE

THE PROTOTYPE IS SPECIFICALLY DESIGNED FOR THE SPEECH-IMPAIRED AND SUCCESSFULLY DEMONSTRATES A SOLUTION TO BRIDGE THE COMMUNICATION GAP.

THE PROTOTYPE CAN RECOGNIZE 320+ WORDS AND CONVERT THEM TO HAND GESTURES WITH 90 PERCENT ACCURACY. THE SYSTEM IS CAPABLE OF RECORDING AND CONVERTING THE SPOKEN STATEMENTS INTO GESTURES.

THE FUTURE SCOPE INCLUDES DEVELOPING A MOBILE APPLICATION FOR THE SAME.

The background is a solid dark blue color. It is decorated with several large, overlapping, organic shapes in a lighter teal or cyan color. These shapes are irregular and fluid, resembling liquid droplets or soft, abstract forms. They are positioned in the corners and along the sides, framing the central text. There are also a few smaller, solid teal circles scattered in the upper right and lower left areas.

THANK YOU!
